piccolo

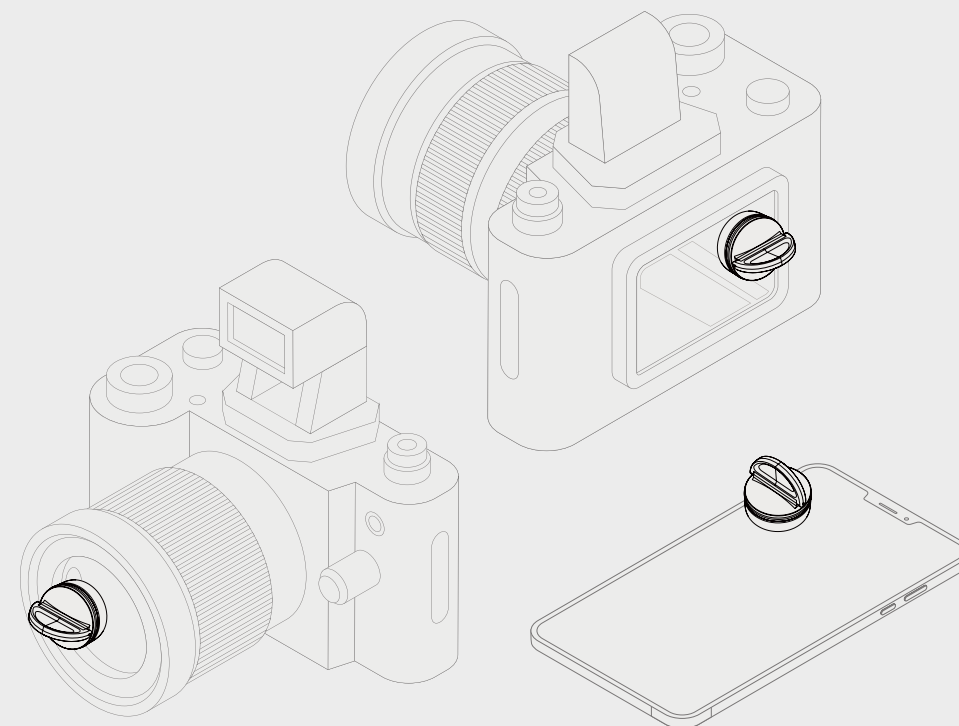

Take everywhere. Clean anywhere

Recommended application range

RECOMMENDED APPLICATION AREA

| Multi-purpose surface cleaner |

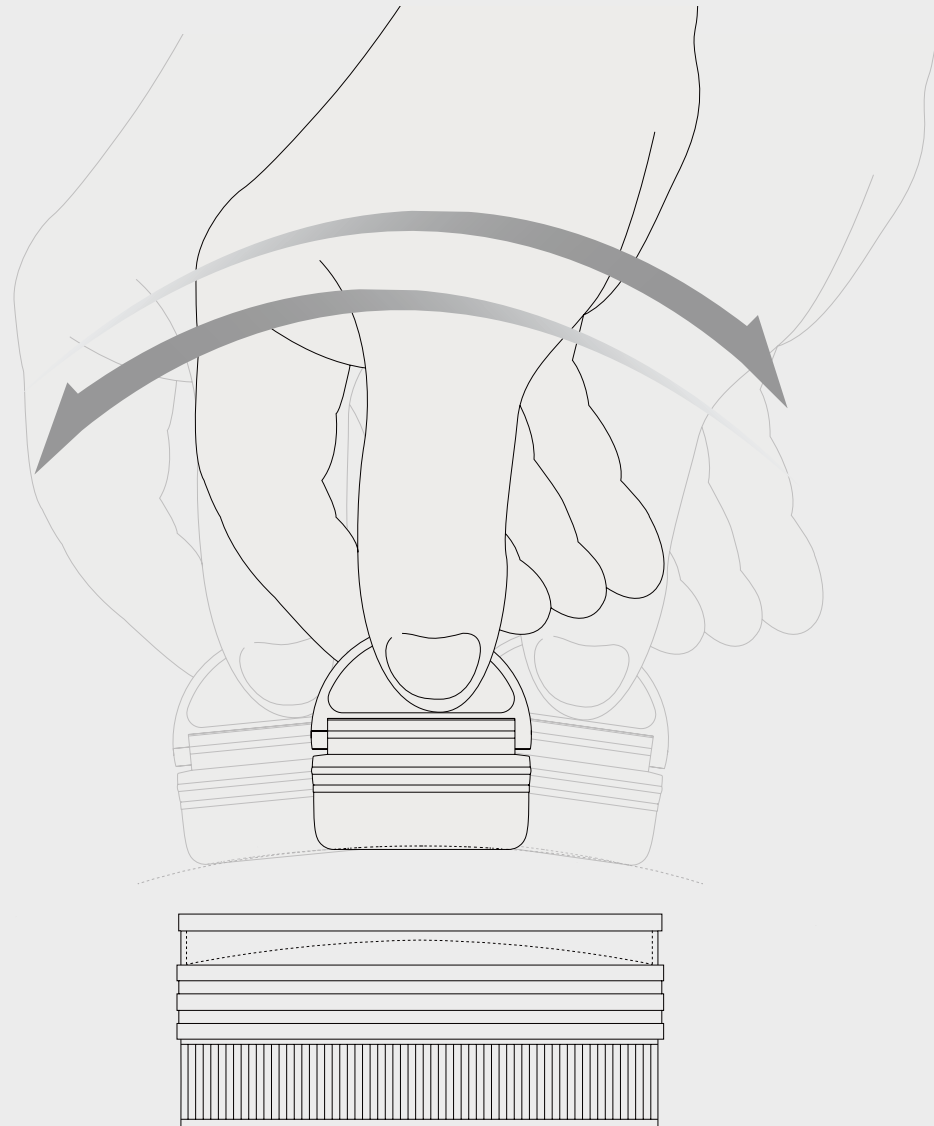

The name "Piccolo" was inspired by the Italian word for small. The design concept is for the product to be small and portable, something users can take anywhere and everywhere. Piccolo multi-purpose electronics surface cleaner is an excellent tool designed for outdoor environments. The unique buckle design allows users to clip onto any straps, bags, and clothes easily. Its structural design allows users to wipe and handle the tool with one hand that works wonderfully on mobile phones, tablets, cameras, etc. The microfiber on the device can gently and easily remove oil, water, and dust from surfaces. Its special cushion design allows the cleaning pad to match the surface perfectly without damaging devices. When the pad is dirty, remove it to wash and dry for the next use. This environmentally conscious design makes it a truly ideal product for the outdoor and on the go.

| Camera use |

With the nature and size of the Piccolo, Piccolo can easily use it indoors and outdoors. The cleaner is suitable for screen or lens cleaning. The cleaning pad is equipped with a microfiber cleaning cloth that easily removes dust, oil, and particles. This is particularly suitable for outdoor use; the pad can keep your device clean and dry. During usage, dust or blow off any hard and solid debris that can damage screens or lenses before cleaning with the pad to avoid scratches.

THE FEATURE DIAGRAM

| The make of the pad |

Piccolo's cleaning pad is made with composite materials. This includes rubber, foam, and microfiber cleaning cloth. With this combination of materials, the cleaning pad becomes a very gentle surface, removing any possibilities of creating scratches. Besides, the pad's make allows the cleaner to follow lens curvature to create the ultimate clean.

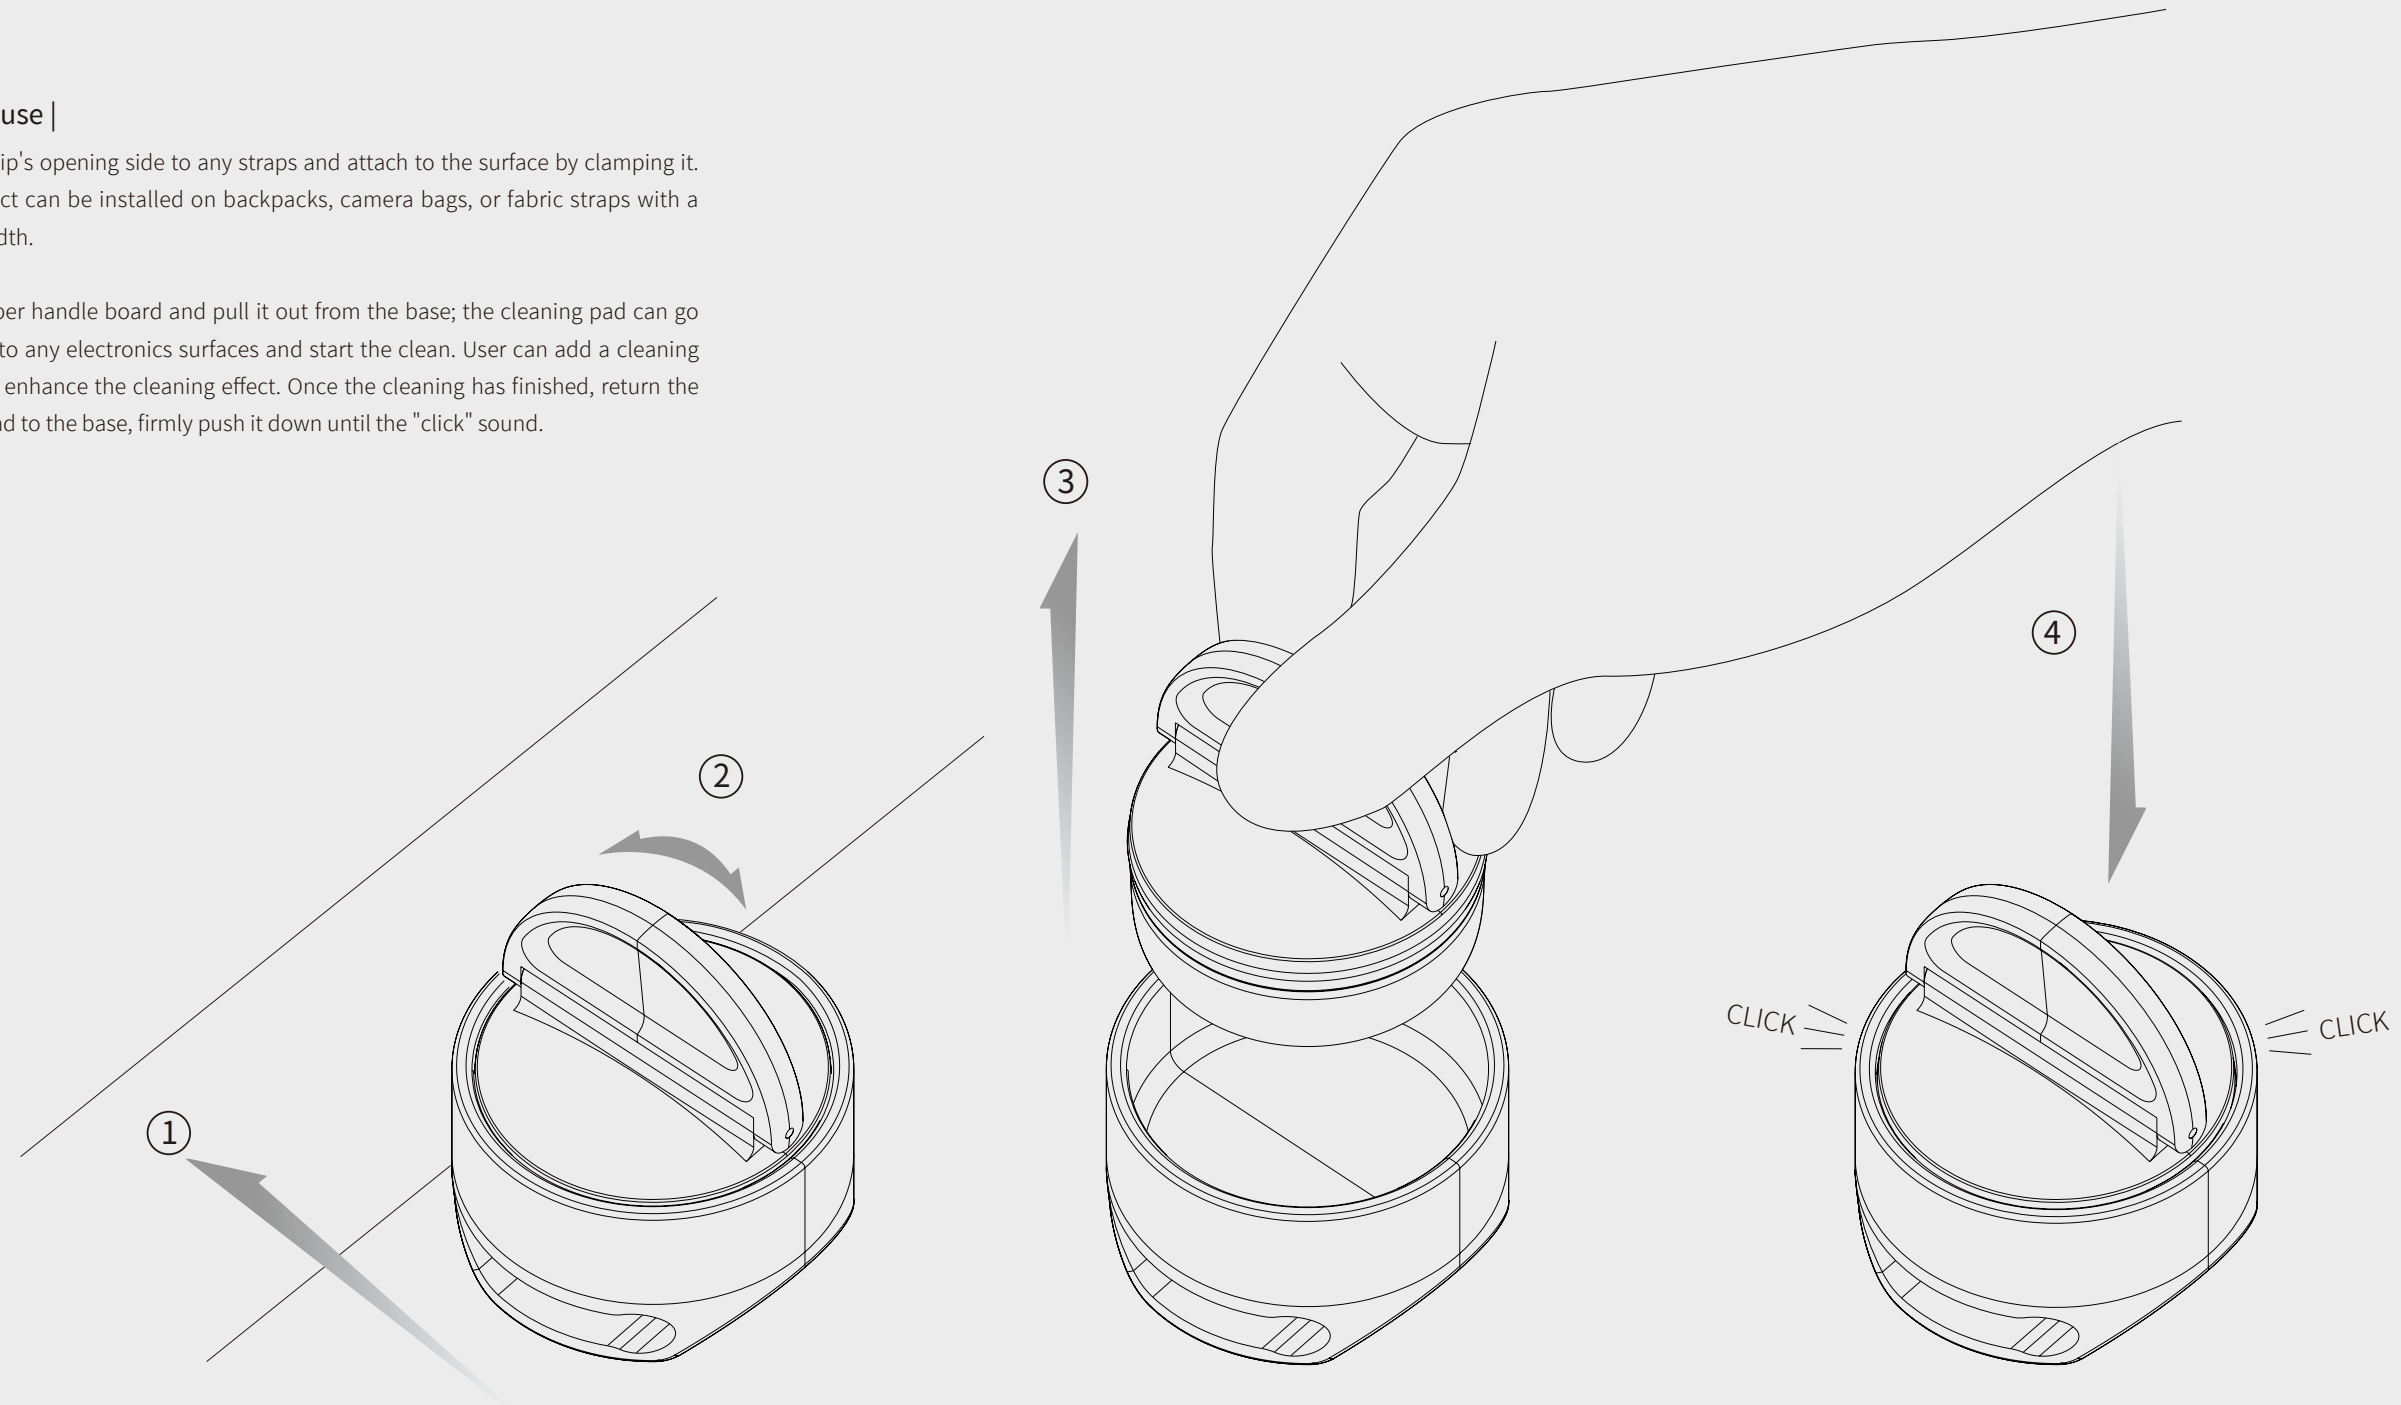

| Application for other products |

Piccolo is not only made for camera cleaning; it can also be used on any flat screens. Goods such as mobile, tablets and computer would be very suitable. The curved and soft cleaning pad will not scratch any surfaces and when using, simply press down so the slight curvatures in the cleaning pad are removed and become flat and glide through the cleaning surface easily.

| How to use |

Align the clip's opening side to any straps and attach to the surface by clamping it. This product can be installed on backpacks, camera bags, or fabric straps with a suitable width.

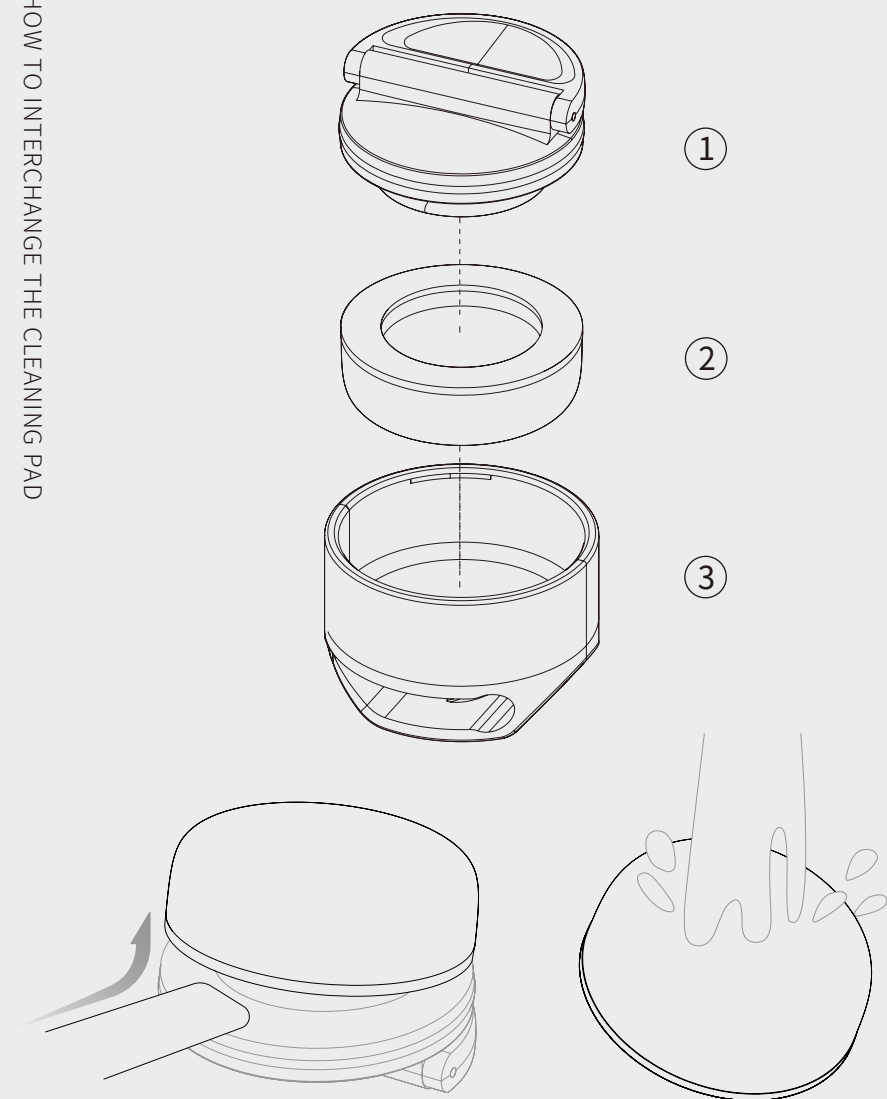

Lift the upper handle board and pull it out from the base; the cleaning pad can go straight onto any electronics surfaces and start the clean. User can add a cleaning solution to enhance the cleaning effect. Once the cleaning has finished, return the cleaning pad to the base, firmly push it down until the "click" sound.

HOW TO INTERCHANGE THE CLEANING PAD

| Changeable and Washable |

The unique structural design allows users to interchange cleaning pads easily. When the pad is dirty, use a flat surface or fingers to remove it from the holder; wash the pad with gentle detergent and dry for the next use. This environmentally conscious design makes it a truly ideal product for the outdoor and on the go.
